

Java

```
class Solution {  
    public double angleClock(int hour, int minutes) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} hour  
 * @param {number} minutes  
 * @return {number}  
 */  
var angleClock = function(hour, minutes) {  
  
};
```

TypeScript

```
function angleClock(hour: number, minutes: number): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    double angleClock(int hour, int minutes) {

    }
};
```

C#

```
public class Solution {
    public double AngleClock(int hour, int minutes) {

    }
}
```

Kotlin

```
class Solution {
    fun angleClock(hour: Int, minutes: Int): Double {

    }
}
```

Go

```
func angleClock(hour int, minutes int) float64 {

}
```
